Editorial:

**ICCF19 Committee in Italy
gives no voice to the italian:**

Open Research Organization.

Open Power unbelievably anticipates the "move" in the chess game filing a Patent Application on march 9th, 2015

to protect Open Science against mere business: in prospective, free licenses will be distributed to selected major protagonists.

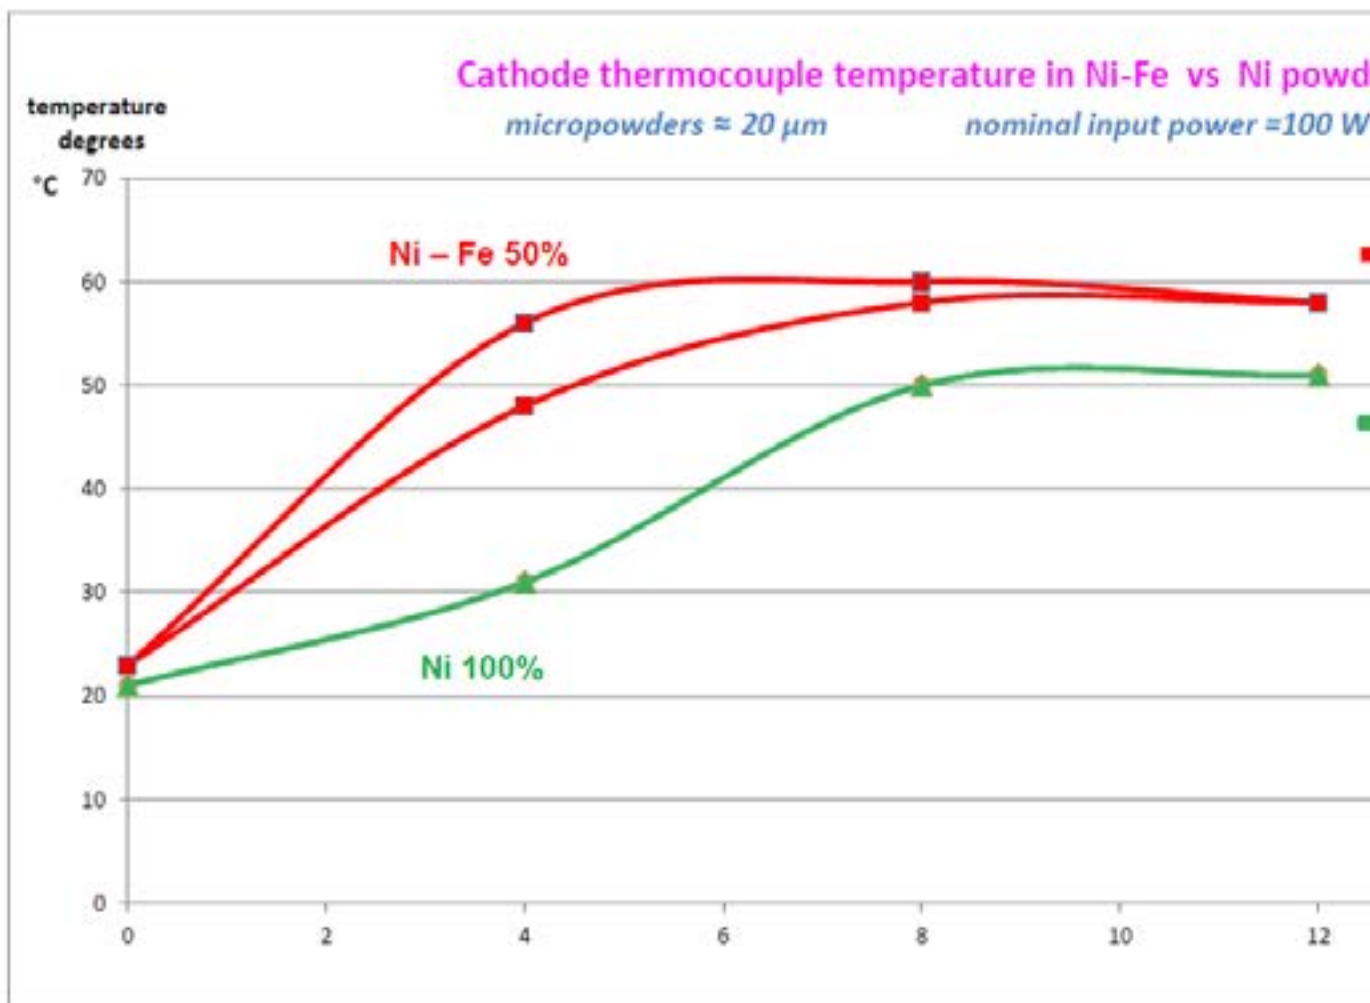

As inferable from the titles of the interventions allowed to the Congress, numerous "tiles" will contribute to confirm the whole mosaic of the *O.P.* process (e. g. Bazhutov, Biberian, Celani, Goryachev, Gromov, Huang, Li, Parkhomov, Petrucci, and so on).

We would have preferred to expose, share and discuss our work together with the involved researchers, instead of merely communicating.

However, luckily, the free circulation of the advanced ideas is guaranteed by the Net, stronger than any obstacle.

Thus, we can now show *in advance* that, according to the preliminary experiments dealt with in the attached report, the "fig. 2" reactor as

conceived in the related Patent Application, does indeed properly work about experimental scopes it was designed for.

Ugo Abundo - Open Power Association

scientific.committee@iccf19.com

To the kind attention of the Scientific Committee at ICCF19

Rome, March 28th , 2015

Subject: Failure to accept our abstract for oral presentation of our work at ICCF19

Dear Sirs,

we do not hide our disappointment after we learned only yesterday, at a distance of only a few days from the event and having already paid the enrollment fees, about our exclusion as speakers at the ICCF19.

Both as an independent researcher, and the chairman of the Italian Scientific Association: "Open Power" for open science, I would like to know the reasons which led the Scientific Committee to take this negative decision. I believe the subject would appear of actual interest.

We are waiting for a kind quick reply.

Our best regards.

Ugo Abundo
